

Tokopedia Loyalty Reward

Prototype-ready product specification

1. Product Overview

Product	Tokopedia Loyalty Reward
Platform	Tokopedia mobile app
Objective	Increase retention and repeat purchases among users who have completed their 3rd purchase.
Core experience	Personalized reward → relevant product discovery → automatic reward application → Purchase #4

Product Hypothesis

If users who have completed 3 purchases receive a personalized reward that gives them a compelling reason to return, then they will be more likely to make their 4th purchase and continue purchasing on Tokopedia.

2. Problem Statement

Users who have completed 3 purchases on Tokopedia tend to stop making subsequent purchases after attractive promotions end. Today, users often need to search for promotions themselves through the homepage or may look for better incentives on other marketplaces, leaving Tokopedia without a strong enough reason to bring them back for their 4th purchase and beyond.

Case evidence: Buyer retention after the 3rd purchase is around 12%. The case hypothesis is that some users initially come because of promotions and then look for other marketplaces when the promotional appeal ends.

3. Target User

Primary: Tokopedia users who have successfully completed their 3rd purchase.

User need: “Give me a compelling reason to keep shopping on Tokopedia after my initial promotions are no longer attractive.”

4. Proposed Solution

Tokopedia Loyalty Reward — After completing their 3rd purchase, users automatically unlock a personalized loyalty reward. The reward should be relevant to the user's shopping behavior and provide a clear, tangible benefit for the next purchase.

Experience goal: Reward discovery → Product discovery → Reward application → Purchase #4.

5. Key Features — Priority Order

P0 — Personalized Loyalty Reward

- Automatically unlock after Purchase #3.
- Personalize reward based on purchase behavior.
- Clearly show value, eligibility, and expiration.
- Allow use on eligible purchases.
- Automatically apply eligible reward at checkout.

P1 — Personalized Homepage

- Prominently display the active reward.
- Show recommendations based on purchase history.
- Highlight eligible products.
- Provide a clear “Use Reward” CTA.

P1 — Reward Push Notification

- Notify when a reward is unlocked.
- Remind before expiration.
- Deep-link to the reward or relevant shopping page.

6. Reward Concept

For the prototype, use a personalized discount voucher. Values are illustrative, not final business rules.

📌 **You've unlocked a special reward!**

Rp30.000 OFF · Min. purchase Rp150.000 · Personalized for you · Use Reward

7. Key User Flow

1. User completes Purchase #3.
2. User sees success confirmation and reward unlocked.
3. User opens reward or returns to homepage.
4. Homepage prominently displays the active reward.
5. User sees relevant eligible recommendations.
6. User selects a product and adds it to cart.
7. Checkout automatically selects/applies the reward.
8. User completes Purchase #4.
9. User sees purchase confirmation and updated loyalty status.

Core behavior: User finds a reward that feels worth using → uses it → completes Purchase #4.

8. Core Screens for Prototype

Screen 1 — Purchase #3 Success

Purpose: Introduce the reward immediately after the third purchase.

- Order success
- Reward unlocked message
- Reward value + expiration
- Use Reward
- Maybe Later

Screen 2 — Personalized Homepage

Purpose: Create a persistent reason to return.

- Tokopedia-style navigation
- Prominent reward card
- Reward status + expiration
- Recommended products
- Eligible-product indicators

Screen 3 — Reward Detail

Purpose: Explain exactly what the user received.

- Reward amount
- Minimum purchase
- Eligible products/categories
- Expiration
- Terms & conditions
- Find Products

Screen 4 — Product Detail

Purpose: Show that the product is eligible.

- Product image/name/price/rating/store
- Reward eligibility badge
- Reward benefit
- Add to Cart
- Buy Now

Screen 5 — Cart / Checkout

Purpose: Make reward usage frictionless.

- Selected product
- Reward automatically selected
- Discount amount
- Updated total
- Place Order

Screen 6 — Purchase #4 Success

Purpose: Confirm purchase and reinforce loyalty.

- Purchase success
- Savings from reward
- Updated loyalty status
- Return to homepage

9. Key Interaction Rules

- A user becomes eligible immediately after completing Purchase #3.
- The reward is visible on the homepage after unlock.
- The reward has a clear expiration date.
- Only eligible products show the reward indicator.
- Eligible rewards are automatically selected at checkout.
- If the cart does not meet the minimum, explain why the reward cannot apply.
- Expired rewards leave the active state and show an expired status.
- Push notifications are only used for users with an active unused reward.
- Prototype should demonstrate the happy path to Purchase #4.

10. Success Metrics

Primary	3rd-to-4th purchase retention	Baseline 12% → Target 20% in 6 months
Secondary	Reward redemption rate	Among eligible users

Success principle: repeat purchase is the primary criterion—not app opens, notification clicks, or homepage visits.

11. Non-Goals

- Do not target all Tokopedia users in the initial phase; focus on users who have completed 3 purchases.
- Do not replace existing Tokopedia promotional mechanisms; loyalty is an additional retention mechanism.
- Do not optimize engagement alone; success is primarily determined by another purchase.

12. Prototype Scope

Clickable mobile e-commerce prototype: Purchase #3 completed → Reward unlocked → Personalized homepage → Reward detail → Recommended product → Product detail → Checkout → Reward applied → Purchase #4 completed.

- Mobile-first UI with a familiar Indonesian e-commerce experience inspired by Tokopedia.
- Keep loyalty reward visually prominent.
- Use realistic Indonesian product names and prices.
- Use realistic illustrative reward values.
- Make primary CTAs clickable and preserve reward state across screens.
- Include a simulated push-notification entry point.
- Do not build unrelated marketplace features.

13. Design Direction

UX principles: Reward visibility · Clear value · Low friction · Personalization · Strong CTA · Trust

CTA hierarchy: Use Reward → Find Products → Buy Now / Add to Cart → Place Order

14. Prototype Success Criteria

- User immediately understands the reward was unlocked after Purchase #3.
- User can easily find the reward again from the homepage.
- User understands which products are eligible.
- User can use the reward without manually entering a voucher code.
- User can see the reward applied before placing the order.
- The prototype clearly demonstrates the path to Purchase #4.

15. Assumptions to Validate

- Users who stop purchasing after the 3rd order are sufficiently motivated by rewards to return.
- Personalized rewards are more compelling than generic promotions for this target segment.

- Showing relevant products alongside the reward helps users find a reason to purchase.
- Reducing friction in reward discovery and application can contribute to higher 3rd-to-4th purchase retention.

Important: The 12% retention baseline and promo-related explanation come from the provided case. Reward-driven behavior and the loyalty mechanism are hypotheses to validate, not established facts.
